

Canjo Care

Like any instrument, you will want to avoid exposing your Canjo to extreme heat or cold and keep it dry. Moisture and extreme temperatures can warp your fretboard. Strings will sometimes break but can be easily replaced with a similar gauge guitar or dulcimer string. New strings stretch so it will need re-tuned more until you break it in.

We tune the canjo to D but you can tune it to any note, if you are playing with someone playing in a different key. Use a guitar tuner, tuner app on your smartphone or on line tuner.
